Product Overview

The Pulse Sensor is a plug-and-play heart-rate sensor for Arduino & OpenBCI. Capable of recording heart rate and heart rate variability (HRV) data.

More Product Info

Pulse Sensor is a heart rate sensor that must be paired with an Arduino or OpenBCI board.

It can be used by students, artists, makers, and developers who want live heart-rate data into their projects. The Pulse Sensor is capable of recording heart rate and heart rate variability (HRV), and it can be plugged directly into the OpenBCI boards. The Pulse Sensor must be connected to an Arduino board (not included) or an OpenBCI Cyton board (not included).

Tutorial HERE

For other Pulse Sensor code, check out the Pulse Sensor Github repos.

The Pulse Sensor Kit includes:

1. Circuit Board Sensor with 3 sewing-holes, for optional affixing to fabric
2. 24-in Ribbon Cable with Male Header pins
3. A Velcro Finger Strap for finger-based PPG
4. An Ear Clip for optional ear-based PPG
5. Transparent Vinyl Dots for electrical insulation
